This concerns the first part of the two-part step 4 accreditation event. The second part of the event is a return visit to the School by the team leader and the QA Manager to confirm the appropriate conduct of the assessment process for the 2017/18 academic year in June 2018. At this meeting, the views of external examiners will be sought. In reaching its conclusion based on the Step 4 visit, the accreditation team made two separate judgements:

1. whether or not the school met the criteria for a new provider delivering a new 5-year MPharm degree; and

2. whether or not the school met the criteria for an established provider delivering an existing 5-year MPharm degree

The accreditation team agreed that both sets of criteria had been met.

Consequently, the accreditation team agreed to recommend to the registrar that the University of East Anglia be permitted to progress from the process for the accreditation of a new 5-year MPharm degree to the process for the reaccreditation of an existing 5-year MPharm degree for a full period of 6 years, subject to one condition (see below).

The result of this is that the University of East Anglia now delivers a fully accredited 5-year MPharm degree, subject to the confirmatory visit later in June and meeting the condition:

Following a satisfactory outcome of the Step 4 Part 2 visit, University of East Anglia MPharm graduates will be permitted to apply to enter pharmacist pre-registration training in Great Britain.

Condition

The University is not permitted to allow a student to regress to the 4-year MPharm degree programme following academic failure once
they have entered the first professional pre-registration placement module; the team understands that this will require a change in the academic regulations. This is to meet criteria 1.1.e and 5.9.

The University must provide a satisfactory response to this condition which contains an acceptable solution before the 28 June Examination Board. This response will need to be considered by the team in order to make a recommendation to the Registrar in time to ensure the eligibility for registration of the University’s MPharm graduates.

Standing conditions
Please refer to Appendix 1

Recommendations
No recommendations were made.

Registrar decision
Following the event, the provider submitted a response to the condition of reaccreditation, and the accreditation team agreed it had been met satisfactorily.

The Registrar of the GPhC accepted the team’s recommendation and approved the accreditation of the programme for a period of 6 years.

Key contact (provider)
Dr Anja Mueller, Director of Teaching and Learning

Accreditation team
Professor Stephen Denyer (Team Leader), Pro Vice-Chancellor (Education and Student Experience), University of Brighton
Mrs Sandra Hall (Academic), Head of Pharmacy Practice, Leicester School of Pharmacy, De Montfort University
Professor Paul Gard (Academic), Deputy Head of School, University of Brighton
Professor Andy Husband (Academic), Professor of Clinical Pharmacy and Head of School, Newcastle University
Ms Gail Curphey (Pharmacist), Pharmacy consultant
Mr Javaad Ayub (Newly Qualified Pharmacist), Medical Adviser, Novartis
Mrs Catherine Boyd (Lay member), Chair of fitness to practise panels for various healthcare regulators

GPhC representative
Ms Joanne Martin, Quality Assurance Manager, GPhC

Rapporteur
Professor Brian Furman, Emeritus Professor of Pharmacology, University of Strathclyde

Key findings

**Standard 1: Patient and public safety**

Criterion 1.1.e is not met and is subject to a condition. The team was satisfied that all other criteria relating to this standard are met. (See Appendix 2 for criteria)

There are systems in place to ensure that students do not jeopardise patient safety. Students are never put in a situation where they are asked to work beyond their competence, and they undertake extensive
practise sessions in a controlled environment within the School before encountering patients; they are always supervised by a member of staff or placement host when in contact with patients, and are monitored when participating in patient-facing activities. At the start of the course, students receive information about the School’s fitness to practise policy, detailing the expectations and procedures, and about the GPhC’s ‘Standards for Pharmacy Professionals’; they sign a statement of professionalism annually to confirm that they understand and will abide by the standards, and that academic penalties may be applied for unprofessional behaviour. Disclosure and barring service (DBS) checks are performed in year 1 and students are required to make additional self-declarations at the beginning of each year; overseas students are required to submit a letter confirming their character and good standing from a figure of authority from their own country. All students are screened by Occupational Health before commencing placements within the degree, and failure to produce appropriate evidence relating to health or good character would prevent a student from participating in any placements. If a staff member, placement host or a fellow student believes that there are concerns relating to student conduct or health that would potentially jeopardise patient safety, these can be reported anonymously to the Chair of the Fitness to Practise Committee; the concern would be reviewed to determine if further investigation and or action is needed. If a student progresses to a fitness to practise hearing, actions may include the provision of additional counselling and support regarding the student’s conduct or health, or matters could be escalated to the Senate Student Disciplinary Committee which could impose appropriate sanctions, including exclusion from the School. In all assessments relating to professional and clinical competence, such as objective structured clinical examinations (OSCEs), pharmaceutical care planning assessments and formulation workshops, students will fail if they demonstrate actions that may have jeopardised patient safety. The team was concerned that students who do not complete the second pre-registration training placement through failure to be signed off as competent may be transferred to the 4-year MPharm and awarded that degree, thus enabling them subsequently to enter pre-registration training independently of the School; by that point the students would have accumulated sufficient academic credits for that degree. Normally, in such circumstances, they would have been required to re-take the relevant placement and assessments but, because these are international students, visa restrictions limit their duration of residence in the UK. The team agreed that the School should not permit the award of a registerable MPharm degree to students failing in year 5 of the MPharm with Placement; this would be in breach of criterion 1.1.e, which states that students must not be awarded an accredited degree or pass pre-registration training if they might pose a risk to patients or the public.

**Standard 2: Monitoring, review and evaluation of initial education and training**

The team was satisfied that all criteria relating to this standard are met.

There are systems in place to monitor, review and evaluate entry requirements, the quality of teaching, learning and assessment, and of placements and other practice learning opportunities, as well as educational resources and capacity. The responsibilities of the University’s Learning and Teaching Committee (LTC) include the development, implementation and review of learning and teaching strategies, the appointment of external examiners and consideration of their reports, arrangements for the regular update, monitoring and review of modules and courses, and the enhancement of the quality of the student academic experience. The Committee works closely with the Science Faculty LTC and the School of Pharmacy Teaching Committee in relation to the internal procedures for the assurance of the quality of learning, teaching and assessment, including course specification, approvals and quinquennial course reviews. The quality assurance procedures for the course include annual evaluation of modules, input from the five external examiners, and data from the National Student Survey (NSS), as well as formal student feedback through the Staff-Student Liaison Committee (SSLC); students can also provide anonymous feedback regarding any aspect of the course through an online ‘feedback box’, comments being considered by the Director of Learning and Teaching, the outcomes being subsequently discussed at the SSLC, minutes from which are provided for all students. After the delivery of each module, students complete online module evaluations. The Course Director completes an annual course monitoring and update report which is submitted and considered by the Faculty; this report addresses
formal student feedback through the staff student liaison committee, and comments on the external examiners’ oral feedback at examination boards, as well as comments on the feedback from placement providers. Additionally, the course is required to be reviewed internally every five years; the next MPharm quinquennial review will take place in 2020. The quality of community placements is assured via a combination of annual meetings with placement hosts, together with feedback from students, which is provided using an online questionnaire. Hospital placements are all conducted by the School’s teacher-practitioners, and students again provide online feedback on these placements. In order to ensure that all students derive benefit from placements, the School offers training to providers and hospital teacher-practitioners in a ‘placements evening’, where information is also given on the experiences that should be offered. The School receives input from an External Advisory Board which, together with input from students, patients and placement providers, has contributed to the development of the new MPharm programme (see standard 5). The quality of the pre-registration training placements is assured by the use of only GPhC-accredited sites with Service Level Agreements (SLAs), and the provision of appropriate induction and training for pre-registration tutors. Site accreditation visits are undertaken by members of School of Pharmacy staff every three years, and feedback is obtained from students on their pre-registration training placement experiences. There are close links between the School and the placement hosts, and the Course Director plays a pivotal role in ensuring that these links are maintained and that quality assurance is monitored at all stages.

**Standard 3: Equality, diversity and fairness**

**The team was satisfied that both criteria relating to this standard are met.**

The University has a dedicated Equality and Diversity office, which helps to collate data on equality and diversity matters across the campus in relation both to staff and students. A reliable framework has been developed within which to identify and develop issues of equality at the University; there is a continuous programme of statistical development which will eventually achieve a full ‘pipeline’ of information from the admission of a student or recruitment of a member of staff to their eventual graduation or decision to leave, all disaggregated by equality characteristics. The School’s Equality Committee meets eight times a year, and deals with all equality and diversity issues in the School. The School received an Athena SWAN Bronze award in 2013, which was renewed in 2014 and 2016. All staff within the School of Pharmacy have received bespoke training in equality and diversity and have completed an online ‘Diversity in the Workplace’ module. Training sessions on ‘unconscious bias’ have also been carried out for University staff. The principles of equality and diversity are embedded across the MPharm curriculum, including coverage in the first year of the fundamentals of the relevant law, illustrated by case examples, and emphasising how this relates to the GPhC’s ‘Standards for Pharmacy Professionals’. Equality and diversity issues are woven into teaching scenarios. Each of the providers of pre-registration training placements has its own equality and diversity policies. Moreover, providers are often in areas with populations comprising more than 50% of people from ethnic minorities and are therefore immersed in a multicultural environment.

**Standard 4: Selection of students and trainees**

**The team was satisfied that all criteria relating to this standard are met.**

The admissions process, which is the same for both the 4-year MPharm and the MPharm with placement, is managed centrally by ARM (Admissions, Recruitment and Marketing). Information on the MPharm with Placement is provided in the University prospectus and MPharm course brochures, as well as on the University and School of Pharmacy websites. Students are selected on their A-Level grades and on success in the interview process; they must also undergo DBS and health checks on arrival at the University just before the commencement of the course. Offers of places on the MPharm are currently made on the basis of applicants achieving either AAB at A-level, including chemistry and a second science from physics, biology or mathematics, or ABB including chemistry and mathematics and another science. All MPharm applicants are interviewed, with most UK-based applicants being interviewed in person;
telephone interviews are used for those who are based overseas, this applying particularly to applicants to the MPharm with Placement. The interviews are held on a one-to-one basis, using consistent, values-based questions, including why the applicant wishes to be a pharmacist. Applicants also participate in a team-based activity, in order to see how they operate in a team; where telephone interviews are used, the general questions are the same but some relate to team-based activities to determine how applicants might perform in a team environment. All elements of the assessment have clear marking criteria to ensure fairness. Students on the 5-year integrated MPharm programme are guaranteed a pre-registration training placement in each of years 4 and 5, but are made aware from the start that this is subject to passing all assessments, as well as the selection and allocation process. The selection and allocation process itself involves students rotating through a number of stations; these comprise stations dealing with pharmaceutical calculations, clinical checks, and communication skills, as well as six multi mini-interviews (MMIs). Students must achieve 70% in the calculations test, as well as giving a satisfactory performance in all other stations; those achieving an inadequate score across the stations must revert to the 4-year programme and there is no opportunity for a second attempt, apart from the calculations test, for which one further attempt is permitted.

**Standard 5: Curriculum delivery and student experience**

**Criterion 5.9 is not met and is subject to a condition. The team was satisfied that all other criteria relating to this standard are met.**

The first two years of the MPharm with Placement are essentially the same as the 4-year MPharm, the only differences being an introductory lecture, which takes place in weeks 3-4 following the first year induction, and which explains the selection process for placements, as well as a further session in year 2, where students meet the prospective pre-registration hosts and are told about the interview and selection process. Year 3 includes the selection and allocation day (see standard 4), which takes place early in the year; the other principal difference between year 3 in the MPharm with Placement programme and the 4-year MPharm is a slight modification of the module ‘Integrating Patient Care through Pharmacy’, which incorporates preparation for the first pre-registration placement; this preparation includes a week-long orientation placement in the establishment where they will undertake their first period of pre-registration training from mid-July until mid-January of year 4. There are currently four modules in each of the first three years, these being shared with the 4-year programme. Years 4 and 5 include various modules in addition to the pre-registration training placements; these are, in year 4 ‘Special Topics for Pharmacists’, ‘Neurology and Mental Health’ and ‘Pharmaceutical Decision Making and Research Skills’, and in year 5, the ‘Research Project’ and ‘Clinical and Pharmaceutical Management in Practice’. The year 4 ‘Special Topics for Pharmacists’ includes compulsory educational aspects, and the bespoke ‘Clinical and Pharmaceutical Management in Practice’ incorporates the development of a business case for a new pharmacy service. The School is introducing a new structure for both programmes from September 2018. In the new programmes, rather than the 12 modules constituting the first three years of the current course, with four in each year, each of years 1 to 3 will comprise a single, 120-credit module. For the MPharm with Placement, similarly to the present programme, year 4 will incorporate the first pre-registration training placement and two additional modules, these being an ‘Advanced Topics’ module, and a large module ‘Managing Complexity in Patient Care’. In addition to the second pre-registration training placement, year 5 will include the Research Project and a ‘Practice’ module. The first year module entitled ‘Preparing to Become a Pharmacy Professional’ will address the transition of students to higher education, focussing on developing key transferable skills, the science underpinning the course being delivered alongside an introduction to professionalism, with science and practice teaching and assessment being integrated throughout. The modules in the new second and third years are entitled respectively ‘Management of Common Conditions’ and ‘Person-centred Medicine from Bench to Bedside’. Horizontal integration within the year 1 to 3 modules will build on the underlying science, with each module containing chemistry, pharmacokinetics, pharmacodynamics, formulation science and drug delivery, pharmacology and therapeutics, clinical evidence and guidelines, care planning and clinical decision making, and communication with patients and with healthcare professionals. Patient-facing activities, including
hospital and community placements, placements in GP practices and inter-professional learning, will be used in all years; throughout the programme, extensive use will be made of expert patients with various conditions such as diabetes and Parkinson’s disease, as well as those with learning disabilities or sensory impairment; these patients will be brought into the University, where students can interact with them in a controlled environment. In light of the integrated teaching in the new programme, assessments will also be integrated, with examination questions incorporating both science and practice aspects; however, the questions will still allow members of staff to identify the areas of the programme with which students might be having difficulties. Students receive extensive feedback on their assessed work, through meeting their advisers for detailed discussions on their performance and where they might have gone wrong. There are detailed procedures for assessing students during their two pre-registration training placements, in which they must be signed off against the 76 GPhC-specified performance standards. The assessment is based on reflective essays, objective structured clinical examinations (OSCEs) and evidence for meeting the 76 performance standards which is accumulated in an electronic portfolio that is checked by the students’ pre-registration tutors and by the School. Successful sign-off against the performance standards and passing the other assessments allows students to enter the GPhC’s Registration Assessment at the end of the fifth year. All assessments of clinical competence, including OSCEs and pharmaceutical care plans will be failed if students demonstrate dangerous practice; similarly, numerous minor transgressions within clinical assessments are recorded by the module leader and could also result in failure. The School’s intention to permit students who fail to demonstrate competence in the final year of the 5-year degree to revert to the 4-year programme was deemed unacceptable by the accreditation team; this would allow such individuals to progress to pre-registration training, despite failure to achieve the required standard, and, moreover, offers such students an advantage over those on the standard 4-year degree through being offered the possibility of a second attempt at pre-registration training. The award of a registerable MPharm to students failing a pre-registration training placement, which is an essential constituent module, would breach the principle of 5.9 that all assessments must be passed. Students in a similar position at other institutions offering 5-year integrated MPharm programmes are awarded non-registerable degrees. This, along with the explanation under standard 1, contributed to the imposition of the condition.

**Standard 6: Support and development for students and trainees**

The team was satisfied that the single criterion relating to this standard is be met.

Students on the MPharm with Placement have access to the same support mechanisms as those on the standard 4-year MPharm programme and are monitored throughout the course for engagement and academic achievement. Every student is assigned a personal adviser who is a member of academic staff within the School. Students meet their advisers regularly, at least three times per year, to discuss their progress and any issues that might affect their academic performance; they can make an appointment to see their personal adviser at any time. The personal advisers provide a link between the student and the other pastoral services that the University provides, including the Student Support Service and Occupational Health. Personal advisers hold tutorials with their first year advisees to discuss issues relating to subjects such as learning and studying, referencing, plagiarism, and collusion. In later years, advisers support their students in preparing their CVs and personal development planning against the School’s undergraduate personal and professional development framework; throughout the course students maintain and develop their portfolios, which include many things, such as records of achievement, curriculum vitae, personal development plans, personal and professional development frameworks, evidence demonstrating skills, and reflective essays. There is a dedicated Virtual Learning Environment (VLE) Blackboard, site which is regularly updated, and a student handbook outlining all aspects of the University, course, procedures and support available is produced annually. The University continues to support the students during their pre-registration training placements, for example, by the Course Director and through visits by their advisers, as well as through conferences taking place at the University. Additionally, students on the MPharm with Placement are supported by their pre-registration tutors and by other local staff when on placement; the pre-registration tutors are fully aware of all the support services provided by the University. From the beginning, they are taught about the UK healthcare system, including NHS structures, the regulatory bodies involved, clinical guidelines, and the
legal and clinical requirements for prescriptions, as well as the charges that apply. Workshops also prepared them for the vocabulary used by patients to describe their health and health-related activities. Students are prepared for the GPhC Registration Assessment through calculations tests and mock assessments supported by UEA alumni, the Royal Pharmaceutical Society and the Centre for Postgraduate Pharmacy Education.

**Standard 7: Support and development for academic staff and pre-registration tutors**

The team was satisfied that all criteria relating to this standard are met.

The University operates a wide range of policies to ensure that staff receive effective personal support and have adequate opportunities to learn and develop; these include a staff appraisal scheme to review regularly the work, development needs and career aspirations of members of staff in relation to the requirements of their School, Faculty or Division, and to take appropriate steps to realise their potential. This scheme provides an opportunity to review the individual’s performance thus far, identify any training and development needs, and address any managerial or individual concerns at an early stage. The Centre for Staff and Educational Development (CSED) promotes and supports good practice in all aspects of developing the University’s staff and provides an extensive and varied programme of workshops and seminars to support the University’s objectives. Members of academic staff are expected to attend conferences pertinent to their area of research and teaching; a Faculty travel fund available, and all members of staff receive £500 per annum which can be spent on attending conferences or other educational events. An induction programme is provided for all new members of staff and the Science Faculty has recently introduced a revised induction procedure which ensures that all staff members gain an understanding of the working of the University. A School-specific induction addresses understanding the MPharm degree programme, and all non-pharmacist staff are required to shadow a community pharmacist and a hospital pharmacist to gain an understanding of the profession of pharmacy. All new members of academic staff must complete the Masters in Higher Education Practice (MA-HEP) programme to a minimum of certificate level; this allows attainment of Fellowship of the Higher Education Academy. Teacher-practitioners, although currently not ATS or ATR members of staff, may also enrol on this programme, although their other commitments may extend the time required to complete it; however, the School tries to facilitate this by planning with their employers. On commencement, each new member of staff is appointed a mentor, and all staff undertaking the MA-HEP programme will have a mentor within the School.

**Standard 8: Management of initial education and training**

The team was satisfied that both criteria relating to this standard are met.

The School is configured along traditional Pharmacy School discipline lines, and comprises the four cognate areas of Pharmacy Practice, Pharmaceutics (Drug Delivery), Pharmacology, and Medicinal Chemistry. The Course Director is responsible for the overall delivery of the programme. Central to the management of the MPharm with Placement is the Teaching Committee, chaired by the Director of Teaching and Learning (who is also the Head of Pharmacology Teaching), which reports to the Faculty Learning and Teaching Committee, which, in turn, reports to the corresponding University-level committee; the Teaching Committee comprises the Heads of Teaching in Medicines Management, Medicinal Chemistry and Drug Delivery, the Heads of each of years 1, 2, 3 and 4, the Chair and Deputy Chair of Examinations, the Placements Manager, the Student Partnership Officer and the Course Directors, as well as student representatives; several member of the Teaching Committee have additional roles, such as the year 3 lead also looking after Fitness to Practise, the year 4 lead also being Head of Medicinal Chemistry Teaching, and the Year 2 lead acting as Senior Adviser. There are monthly meetings of the teaching groups. Student attendance and engagement are monitored throughout the course; attendance at all teaching sessions is compulsory and is monitored through registers.

**Standard 9: Resources and capacity**
The team was satisfied that all criteria relating to this standard are met.

The University comprises four Faculties (Health, Science, Social Sciences and Humanities), each of which has its own budget decided by the Executive Team of the University; the School of Pharmacy lies within the Faculty of Science. The Dean of the Science Faculty, along with the Faculty Director of Finance assigns the School budget. Space charges and infrastructure costs are ‘top sliced’ from the School budget, so that the remainder of funding is available in its entirety for use within the School. The School budget plan, which operates on a five-year planning cycle, is calculated based upon the expected numbers of Home/EU and overseas undergraduate and postgraduate students, along with expected overhead income from research grants. For 2017/18, the income to the School will be £6.47M, of which £3.83M is apportioned to running the University. Of the remaining funds, around £2M is spent on payroll and the rest on resource for the School. The original recruitment target of 35 students for the MPharm with Placement had been cut to 15 from the 2018/19 session onwards, based on the recruitment of only 12 students for the current academic year. Several factors had impacted on recruitment, these being the perception of the UK as being unwelcoming to international students, the media coverage surrounding Brexit, and the high student fees compared with those imposed by other countries. This risk is being managed by exploring closer working with INTO, with the possibility of introducing a joint foundation year, and by exploring other markets, for example in Nigeria; in this context, the Pro-Vice Chancellor for the Faculty of Science now has an international remit, and there is an SE Asia Dialogue Group which is building links in Malaysia and is exploring accreditation in that country. The School is also exploring the possibility of offering targeted bursaries for the programme.

The School currently has 28 full time faculty members, including five professors, two readers, eight senior lecturers, 11 lecturers and two research fellows; additionally, there is a 0.6 FTE senior lecturer in Pharmacy Practice and a 0.8 FTE lecturer in Pharmaceutical Cell Biology. The School also currently employs ten part-time teacher-practitioners, who attend for 1-2.5 days per week depending on their contracts. The student/staff ratio is currently 14.6:1. In total, eleven staff members are UK registered pharmacists, and three have pharmacy degrees from overseas; thus, including teacher-practitioners, there is a total of 21 pharmacists within the School. Technical support across the Faculty of Science is centralised, so that the School of Pharmacy is now supported by an extensive team of teaching technicians.

There are extensive educational resources, including the Blackboard VLE, IT and computer facilities, and the library, which has a large number of electronic and print journal and book collections; online reading lists for each module link directly to the relevant electronic resource. The dispensary now has 40 individual workstations with labellers where students have full internet access and can utilise Microsoft Office, Medicines Complete and other University packages such as SPSS. The pharmacy management system allows students to create and maintain patient medication records and produce labels on University computers. The dispensary holds a wide variety of stock and a large number of the commonly used reference sources found in medicines information departments, as well as incorporating consultation spaces for communication skills sessions or individual stations for the OSCEs. Each IT workstation has a webcam included to enable communication skills sessions to be recorded by students for them to review after completion of the workshop.

Teaching laboratory space is shared with Chemistry (for pharmaceutics and medicinal chemistry) and with Biological Sciences (for pharmacology). The University has designed a new building for Science Teaching and building started on this facility in Spring 2018, with an expected opening date of September 2019. These new facilities will house dedicated laboratories for medicinal chemistry, pharmaceutics and pharmacology, all within the same building and located near to the new Julian Study Centre teaching block.

**Standard 10: Outcomes**
The team was satisfied that all 58 outcomes relating to Standard 10 will be delivered at the appropriate level.

The team scrutinised the learning outcomes by discussions with the teaching staff. Four outcomes were selected for detailed discussion; the outcomes discussed were 10.1.g, 10.1.h, 10.2.4.a, and 10.2.5.e. In these discussions, the team explored how the outcomes were delivered, how knowledge was integrated, and how the outcomes were assessed to show the appropriate level of achievement (‘knows how’, ‘shows how’ or ‘does’). Having discussed the selected outcomes, and having scrutinised the documentation relating to these and to the other outcomes, the team was confident that all 58 outcomes are met at the appropriate levels.

Indicative syllabus

The team was satisfied with the School’s use of the Indicative Syllabus to inform its curriculum.

The team agreed that the MPharm with Placement degree met the requirements of Directive 2005/36/EC of the European Parliament and of the Council on the recognition of professional qualifications for the initial education and training of pharmacists.
Appendix 1 - Standing conditions

The following are standing conditions of accreditation and apply to all providers:

1. The record and report include other comments from the team, and providers are required to take all comments into account as part of the accreditation process. The provider must confirm to the GPhC that required amendments have been made.

2. The provider must respond to the definitive version of the record and report within three months of receipt. The summary report, along with the provider’s response, will be published on the GPhC’s website for the duration of the accreditation period.

3. The provider must seek approval from the GPhC for any substantial change (or proposed change) which is, or has the potential to be, material to the delivery of an accredited course. This includes, but is not limited to:
   a. the content, structure or delivery of the accredited programme;
   b. ownership or management structure of the institution;
   c. resources and/or funding;
   d. student numbers and/or admissions policy;
   e. any existing partnership, licensing or franchise agreement;
   f. staff associated with the programme.

4. The provider must produce and submit to the GPhC on an annual basis:
   a. requested data on student numbers and progression and degree awards;
   b. requested information about the extent of human and physical resources it enjoys for the delivery and support of the degree course.

5. The provider must make students and potential students aware that successful completion of an accredited course is not a guarantee of a placement for a pre-registration year or of future employment as a pharmacist.

6. The provider must make students and potential students aware of the existence and website address where they can view the GPhC’s accreditation reports and the timetable for future accreditations.

7. Whenever required to do so by the GPhC, providers must give such information and assistance as the GPhC may reasonably require in connection with the exercise of its functions. Any information in relation to fulfilment of these standing conditions must be provided in a proactive and timely manner.

Appendix 2 – Standards

GPhC standards for the initial education and training of pharmacists

NB. Information that is shaded grey or shown in grey italics is only applicable to those wishing to offer a 5-year MPharm degree with intercalated periods of pre-registration training.

Standard 1: Patient and public safety

1. There must be clear procedures to address concerns about patient safety arising from pharmacy education and training. Concerns must be addressed immediately.

1.1 There must be effective systems in place to ensure that students and trainees:
   1.1.a do not jeopardise patient safety;
   1.1.b only do tasks for which they are competent, sometimes under supervision;
1.1.c are monitored and assessed to ensure they always practise safely. Causes for concern should be addressed immediately;
1.1.d have access to support for health, conduct and academic issues;
1.1.e must not be awarded an accredited degree or pass pre-registration training if they might pose a risk to patients or the public;
1.1.f understand what is and what is not professional behaviour and are familiar with the GPhC’s standards for pharmacy professionals (2017);
1.1.g understand what fitness to practise mechanisms apply to them. All schools of pharmacy must have fitness to practise procedures to deal with student causes for concern;
1.1.h undergo required health and good character checks;
1.1.i understand that it is an offence to impersonate a pharmacist. Pharmacists are registrants of the GPhC.

Standard 2: Monitoring, review and evaluation of initial education and training

2. The quality of pharmacy education and training must be monitored, reviewed and evaluated in a systematic and developmental way.

2.1 There must be systems and policies in place covering:

2.1.a information about roles and responsibilities and lines of accountability;
2.1.b university information on:
    2.1.b.i entry requirements;
    2.1.b.ii the quality of teaching, learning and assessment;
    2.1.b.iii the quality of placements and other practice learning opportunities;
    2.1.b.iv appraisal and feedback systems for students and trainees;
    2.1.b.v supervision requirements;
    2.1.b.vi educational resources and capacity;
These must be monitored, reviewed and evaluated systematically. When an issue is identified it must be documented and dealt with promptly.

2.1.c pre-registration tutors evaluating trainees. To do this, tutors must have access to reliable evidence about a trainee’s performance. Tutors must be competent to assess the performance of trainees;

2.1.d the quality and development of pre-registration tutors

Standard 3: Equality, diversity and fairness

3. Initial pharmacy education and training must be based on principles of equality, diversity and fairness. It must meet the requirements of all relevant legislation.

3.1 Systems and policies for capturing equality and diversity data. Concerns should be documented, addressed and disseminated;
3.2 Strategies for staff training in equality and diversity

Standard 4: Selection of students and trainees

4. Selection processes must be open, fair and comply with relevant legislation. Processes must ensure students and trainees are fit to practise at the point of selection. Selection includes recruitment and admissions.

4.1 Selection process must give applicants the information they need to make an informed application.
4.2 Selection criteria must be explicit. They should include:
4.2.a meeting academic and professional entry requirements;
4.2.b meeting English language requirements appropriate to MPharm degree study. Guidelines issued by English language testing bodies should be followed to ensure that admissions language requirements are appropriate;
4.2.c meeting numeracy requirements;
4.2.d taking account of good character checks, such as Criminal Records Bureau (CRB)/Disclosure Scotland checks;
4.2.e passing health checks (subject to reasonable adjustments being made). Health checks could include self-evaluations and/or evaluations by healthcare professionals;
4.2.f recognising prior learning, where that is appropriate.

4.3 Selectors should apply selection criteria fairly. They should be trained to do this. Training should include equality and diversity matters

Standard 5: Curriculum delivery and the student experience

5. The curriculum for MPharm degrees and the pre-registration scheme must deliver the outcomes in Standard 10. Most importantly, curricula must ensure students and trainees practise safely and effectively. To ensure this, pass criteria must describe safe and effective practice.

5.1 Curricula must be integrated.
5.2 Curricula must be progressive, dealing with issues in an increasing more complex way until the right level of understanding is reached.
5.3 An MPharm must be delivered in an environment which places study in a professional and academic context and requires students to conduct themselves professionally. Pre-registration training must be delivered in a professional environment which requires trainees to conduct themselves professionally.
5.4 An MPharm must be delivered in an environment informed by research. This means that whether or not all staff are engaged in research, their teaching must be informed by research.
5.5 An MPharm degree teaching and learning strategy must set out how students will achieve the outcomes in Standard 10. Learning opportunities must be structured to provide:
5.5.a an integrated experience of relevant science and pharmacy practice;
5.5.b a balance of theory and practice;
5.5.c independent learning skills.
5.6 The MPharm degree curriculum must include practical experience of working with patients, carers and other healthcare professionals. Practical experience should increase year on year.
5.7 There must be a clear assessment strategy for the MPharm degree. Assessment methods must measure the outcomes in Standard 10.
5.8 The MPharm degree assessment strategy should include:
5.8.a diagnostic assessments;
5.8.b formative assessments;
5.8.c summative assessments;
5.8.d timely feedback.
5.9 Academic regulations must be appropriate for a degree that is both academic and professional and may lead to further professional training. As a general principle, all assessments must be passed. This means that condonation, compensation, trailing, extended re-sit opportunities and other remedial measures should be extremely limited, if they are permitted at all. MPharm degree academic regulations may be more stringent than university norms. This may include higher than usual pass marks for assessments demonstrating knowledge and skills essential to safe and effective pharmacy practice.
5.10 Marking criteria must be used for all assessments and all pass criteria must reflect safe and
effective practice.

5.11 Patient safety must be paramount in assessments: any evidence of an assessment demonstrating unsafe practice must result in failure.

5.12 A pre-registration training plan must describe how the learning outcomes for pre-registration will be delivered.

5.13 A pre-registration training plan must describe all assessments, including tutor evaluations and tutor sign-offs.

Standard 6: Support and development for students and trainees

6. Students and trainees must be supported to develop as learners and professionals during their initial education and training.

6.1 A range of mechanisms must be in place to support students and trainees to develop as learners and professionals.

Standard 7: Support and development for academic staff and pre-registration tutors

7. Anyone delivering initial education and training should be supported to develop in their professional roles.

7.1. There must be a range of mechanisms in place to support anyone delivering initial education and training to develop in their role.

7.2. Induction programmes are provided for and university staff as appropriate. This should include induction programmes for non-pharmacists working on MPharm degrees.

7.3. Everyone involved in delivering the curriculum should have:
   7.3.a effective supervision;
   7.3.b an appropriate and realistic workload;
   7.3.c effective personal support;
   7.3.d mentoring;
   7.3.e time to learn;
   7.3.f continuing professional development opportunities.

7.4. Tutors should have an identified source of peer support.

Standard 8: Management of initial education and training

8. Initial pharmacist education and training must be planned and maintained through transparent processes which must show who is responsible for what at each stage.

8.1. All education and training will be supported by a defined management plan with:
   8.1.a a schedule of responsibilities
   8.1.b defined structures and processes to manage the delivery of education and training

Standard 9: Resources and capacity

9. Resources and capacity are sufficient to deliver outcomes.

9.1 There must be:
   9.1.a robust and transparent mechanisms for securing an appropriate level of resource for delivering an accreditable MPharm degree;
   9.1.b sufficient staff from relevant disciplines to deliver the curriculum to students and trainees. Staff must be appropriately qualified and experienced. The staffing profile must include:
9.1.b.i sufficient numbers of pharmacists – registrants of the GPhC – with experience of teaching in higher education to ensure that an MPharm degree can produce students equipped to enter pharmacist pre-registration training in Great Britain.

9.1.b.ii sufficient numbers of pharmacists to act as tutors and professional mentors at university and in pre-registration. Not all personal tutors must be pharmacists.

9.1.b.iii pharmacists who are leaders in the profession and in their university, who can influence university policy relevant to pharmacy

9.1.b.iv non-pharmacist academics who can influence school and university policy relevant to pharmacy

9.1.b.v staff who are sufficiently experienced to supervise research. It would be unusual for anyone to supervise research at a particular level unless they had researched to that level or beyond. New research supervisors must be mentored and signed off as being fit to supervise after a period of mentoring

9.1.b.vi science academics who understand the relevance of their discipline to pharmacy and deliver their area of expertise in a pharmaceutical context

9.1.b.vii academic pharmacists and other experienced MPharm degree staff who are able to act as mentors to non-pharmacist colleagues

9.1.c pre-registration tutors who meet the GPhC’s standards for pre-registration tutors;

9.1.d career pathways in universities for all staff teaching on MPharm degrees, including pathways for practice staff

9.1.e clear lines of authority and responsibility for the strategic organisation and day-to-day management of placements

9.1.f training and ongoing support for all non-pharmacists involved in the delivery of MPharm degrees which must help them understand:
9.1.f.i help and understand the relevance of their work to pharmacy
9.1.f.ii how to deliver their area of expertise in a pharmaceutical context

9.1.g appropriate learning resources

9.1.h accommodation and learning resources that are fit for purpose

9.1.i pre-registration premises which meet the GPhC’s standards for pre-registration premises

**Standard 10: Outcomes**

**10.1 Expectations of a pharmacy professional**

<table>

<tr>
<td>10.2.4.d Communicate information about available options in a way which promotes understanding</td>
<td>Shows how</td>
<td>Does</td>
</tr>
<tr>
<td>10.2.4.e Support the patient in choosing an option by listening and responding to their concerns and respecting their decisions</td>
<td>Shows how</td>
<td>Does</td>
</tr>
<tr>
<td>10.2.4.f Conclude consultation to ensure a satisfactory outcome</td>
<td>Shows how</td>
<td>Does</td>
</tr>
<tr>
<td>10.2.4.g Maintain accurate and comprehensive consultation records</td>
<td>Shows</td>
<td>Does</td>
</tr>
<tr>
<td>10.2.4.h Provide accurate written or oral information appropriate to the needs of patients, the public or other healthcare professionals</td>
<td>Shows</td>
<td>Does</td>
</tr>
</tbody>
</table>

### 10.2.5 Maintaining and improving professional performance
10.2.5.a Demonstrate the characteristics of a prospective professional pharmacist as set out in relevant codes of conduct and behaviour | Does | Does |
10.2.5.b Reflect on personal and professional approaches to practice | Does | Does |
10.2.5.c Create and implement a personal development plan | Does | Does |
10.2.5.d Review and reflect on evidence to monitor performance and revise professional development plan | Does | Does |
10.2.5.e Participate in audit and in implementing recommendations | Knows how | Shows how |
10.2.5.f Contribute to identifying learning and development needs of team members | Knows how | Does |
10.2.5.g Contribute to the development and support of individuals and teams | Knows how | Does |
10.2.5.h Anticipate and lead change | Knows how | Shows how |

**Appendix 3 – Indicative syllabus**

It is expected that education providers will use the indicative syllabus to develop a detailed programme of study which will enable pharmacists to meet the learning outcomes.

**A1.1 How medicines work**

**Therapeutics**
- Routes of administration
- New therapeutic advances
- Infection control
- Complementary therapies
- Clinical therapeutic uses of drugs

**Applied Physical, Chemical and Biological sciences**
- Sources and purification of medicinal substances
- Physicochemical characteristics of drugs and biological systems
- Thermodynamics and chemical kinetics
- (Bio)Analytical principles and methods
- Drug design and discovery
- Cell and molecular biology
- Biochemistry
- Genetics
- Microbiology
- Immunology
- Pharmaceutical chemistry
- Drug identification
- Drug synthesis

**Pharmacology, pharmacokinetics & pharmacodynamics**
- Contraindications, adverse reactions and drug interactions
- ADME
- Prediction of drug properties
- Pharmacogenetics and pharmacogenomics
- Drug and substance misuse
- Clinical toxicology and drug-over-exposure
- Molecular basis of drug action
- Metabolism

**Pharmaceutical technology including manufacturing & engineering science**
- Biotechnology
- Manufacturing methods
- Quality assurance processes
- Sterilisation and asepsis
- Environmental control in manufacturing

**Formulation and material science**
- Materials used in formulations and devices
- Biopharmaceutics, developmental pharmaceutics, pre-formulation and formulation studies
- Design and standardization of medicines
- Microbiological contamination
- Contamination control
- Product stability
- Medical devices

**A1.2 How people work**

**Normal & abnormal structure & function**
- Nutrition
- Physiology
- Pathology
- Infective processes

**Sociology**
- Social and behavioural science

**Health psychology**
- Health promotion
- Disease prevention
- Behavioural medicine

**Objective diagnosis**
- Differential diagnosis
- Symptom recognition
- Diagnostic tests

**Epidemiology**
- Aetiology and epidemiology of (major) diseases

**A1.3 How systems work**

**Healthcare management**
- Public health
- Organisations: NHS, DH, govt priorities
- Other professionals
- Health care systems

**Evidence-based practice**
- Health information systems/ resources
- Health policy and (pharmaco)economics
Professional regulation
- Legislation
- Professional ethics and fitness to practise
- Sale and supply of medicines
- CPD
- Political and legal framework

Medicines regulation
- Evaluation and regulation of new drugs and medicines
- Pharmacopoeial specifications and biological standards
- Medicines licensing
- Product quality, safety and efficacy
- The supply chain
- Packaging, labelling and patient information

Clinical governance
- SOPs
- Research methodology / research ethics
- Risk & quality management
- Good manufacturing/dispensing practice
- Good clinical practice
- Health policy, clinical and science research methods

Clinical management
- Disease management
- Chronic medicines management
- Medicines use review
- Care planning

Workplace Regulation
- Health & Safety
- Sexual boundaries
- Independent Safeguarding Authority
- Data protection
- FOIA
- Consumer protection incl. complaints procedures

A1.4 Core and transferable skills

Professionalism

Research and research methods

Critical appraisal
- Audit and learning from errors

Problem solving
- Study skills
- Team-working skills

Clinical decision making
- Leadership skills

**Accurate record keeping**

**Reflective practice (incl. continuing professional development)**

**Effective communication**
- Interpersonal skills
- Medical terminology

**Interpret & interrogate clinical data**

**Analyse & use numerical data**

**Pharmaceutical numeracy**

**Technological literacy**

**A1.5 Attitudes and values**

See the GPhC *Code of Conduct for pharmacy students (2010)* and *Standards of conduct, ethics and performance (2010)*
